First impressions:

PROs -

Runs on both laptop and desktop systems. The recommended specs are a good starting point.
LOTS of options and variations. This is not a game. It is a 2DV/3D railroad modeling application.
The UI is smooth, but takes getting used to.

CONS -

A few graphical glitches, a couple of bugs with track and switchlaying. Workarounds solved these bugs.

LOCALIZATION:

This is the first time the game is localized for English, but the translations are excellent IMO.

Some folks may be put off that the game models European railways primarily, but there are assets available (and a friendly and helpful forum) to help model North American railways.

CONCLUSION:

If you like modeling train sets (there is no built-in economy) then this is a great package (get the expert version).. I hope you'll understand. This is good software but...I was trying to learn how to use it with eep videos on youtube and found that most of the models from those videos (eep 11) are missing. And I think that it is because those models were moved to shop on their site. Simple greed I think :(Hope I am wrong.

PS: Buy EEP13 instead it is much better.

PPS: Successfully imported all models from EEP13
